

Survey Evaluation and Pilot Testing

Department of Political Science and Government
Aarhus University

November 3, 2014

- 1 Small Groups
- 2 Survey Evaluation
- 3 Activity I
- 4 Activity II
- 5 Preview of Next Time

Schedule for remainder of course

- Schedule
 - Week 46: Interviewing
 - Week 47: Recruitment
 - Week 48: Data management
 - Week 49: No class!
 - Weeks 50–51: Presentations

- Available Dec. 4–5 for meetings

- Exams are due in January

- 1** Small Groups
- 2 Survey Evaluation
- 3 Activity I
- 4 Activity II
- 5 Preview of Next Time

Small Group Discussions

- Discuss:
 - Your questionnaire
 - Mode for your project

- Report back any issues you encountered and common themes in your conversations

- 1 Small Groups
- 2 Survey Evaluation**
- 3 Activity I
- 4 Activity II
- 5 Preview of Next Time

What is survey evaluation?

- Systematic testing of a survey instrument prior to data collection

Why pilot test?

Why pilot test?

- Want to collect accurate, high-quality data
- Survey design is challenging to get right
- Surveys are expensive
- We may not be knowledgeable about the survey topic or population

What can we learn from evaluation?

What can we learn from evaluation?

- Determine how to ask questions
- Determine how *not* to ask questions
- Identify confusing questions or answer options
- Identify patterns of bias
- Identify sensitive items
- Identify context effects
- Identify mode effects
- Estimate survey duration
- Estimate and improve nonresponse & refusal rates

Methods of evaluation

- Informal discussion
- Expert and/or peer review
- Small- n pilot tests
 - Record checking
 - Questionnaire experiments
- Focus groups
- Cognitive interviewing
- Interviewer training

Informal Discussion

- This is what we've been doing
- Good starting point
- Not systematic

Expert/peer review

- Identify subject area experts
- Ask them to review the design and instrument
- Revise based on expert feedback

Pilot tests

- Administer questionnaire to small sample
- Not necessarily random sample
- Might use sample for other types of evaluation
 - Focus group
 - Cognitive interviewing

Record checking

- Check responses from a pilot survey against administrative records
- Useful for recall-type questions

Questionnaire experiments

- Randomly assign respondents to different:
 - Individual items
 - Batteries of items
 - Entire questionnaires
 - Modes

- Compare results and use “best” methods

Focus groups

- Use before *or* after a questionnaire is drafted

- Multiple possible uses
 - Develop knowledge about subject area or population
 - Identify topics to include in survey
 - Draft question wordings
 - Clarify question and response meaning
 - Etc.

Cognitive interviewing

- Conduct mock interviews

- Instead of recording answers, record respondents':
 - Interpretations of questions and answers
 - Difficulties understanding items or topics
 - Concerns with items or topics
 - Sensitivity
 - Etc.

- Use quantitative and qualitative analyses

Interviewer Training

- Train interviewers how to conduct the interview
- Use their prior knowledge and experience from the field to update design
- We'll talk more about this next week

- 1 Small Groups
- 2 Survey Evaluation
- 3 Activity I**
- 4 Activity II
- 5 Preview of Next Time

Activity I: Cognitive Interviewing

1 Small Groups

2 Survey Evaluation

3 Activity I

4 Activity II

5 Preview of Next Time

Activity II: Focus Groups

- 1 Small Groups
- 2 Survey Evaluation
- 3 Activity I
- 4 Activity II
- 5 Preview of Next Time**

Agenda for next class

- Discuss your survey evaluation plans
- Discuss interviewer training
- May start discussing fielding/recruitment

Assignment for next week

- Draft a plan for how to evaluate your survey
- Discuss these in small groups
- Implement at least part of that plan for the exam
